

UI Functionalities:

1. Mobile Hamburger Menu

The menu will be a hamburger menu until it is large enough to accommodate the desktop menu. A user will be able to click the hamburger and the menu will expand below it. They can click the hamburger again to minimize the menu.

2. Slide-out Ad

There will be a slide-out ad reminding what donations are accepted at Goodwill. This will be accessible on all pages so when a user is looking at locations or the homepage, they can quickly slide out the donations ad rather than going to the page itself. They will click the ad to expand it, and click an 'x' to minimize it again.

3. Accordion

The accordion element will expand the content of that section when the header is clicked. I will utilize this on the "Volunteer" page to describe the different ways a user can volunteer their time. They will be able to minimize the section again by clicking an 'x'.

UI Element with API

4. Show weather report in area for today

When looking up what can be donated, a section at the top of the page will show the current weather. It will start on Orlando and there will be a menu selection option to choose a different Central Florida city. There will be a header "Is today a good day to drop off my donations?" This feature will help users decide if the weather will hold while they bring their donations over.

I will use the OpenWeather API to create this UI element.
